

Introduction

ShoreWorX shoring solutions are designed with the Australian market in mind. As you would expect from an Australian owned company with Australian manufactured products, we understand the need for superior quality, safety, dependability and durability. We have an outstanding reputation for delivering safe, reliable and efficient shoring solutions.

Structural Design Certificate

Panel Type (mm)	Panel Length (mm)	Panel Height (mm)	Panel Thickness (mm)	Strut size 0m>3.0m	Strut size 3.1m>4.0m	Weight per Panel (kg)
X-150 Lower	7300	2400	150	RHS - 150x100x9		1370
Struts Configurations	Min. width - Max width (mm)			WLL- Triangular load/uniform load (kPa)		
4 struts configuration	600-4000			68/45		
6 struts configuration	600-4000			76/53		

This design check has been carried out in accordance with Australian engineering principles and, in particular with the Australian Standards listed below:

AS/NZS 1664 – 1997 Aluminium Structures

AS 4744.1 – 2025 Shoring and trench lining – Design

AS/NZS 1170.0:2002 Structural design actions: General principles

AS/NZS 1170.1:2002 Structural design actions: Permanent, imposed and other actions

Design Certification: Lifting points

To Whom It May Concern:

ShoreWorX has conducted a structural design check on the lifting / handling points for the X-150 7300 x 2400 shoring panels. They have been reviewed, tested, and comply with AS4991-2024, AS1418.1-2002.

Design Criteria

- **Load Capacity:**
 - The design ensures that each lifting / handling point on the X-150 panel is capable of handling a maximum Working Load Limit (WLL) of 6 tonnes, or 24 tonnes when utilising four lifting points.
 - Safety factor: **3** in accordance with AS 4991-2004- Lifting Devices.
- **Design Standards:**
 - Complies with
 - **AS4991-2004** Lifting Devices
 - **AS1418.1-2002** Crane, Hoists and Winches.
